Dipanshu Singh.

B.Tech CSE (AI & ML) student · open-source & local-AI developer

Ayodhya, India diipupc@gmail.com github.com/diipanshuuuu github.com/htmnsrc
linkedin.com/in/dipanshu-singh-86b2ba444

SUMMARY

First-year computer science student specialising in AI & ML who builds open-source tools end to end: browser extensions, web interfaces and desktop apps. Hands-on with running and training open-weight models locally using Ollama and Hugging Face. Open to internships, freelance work and open-source collaboration.

EDUCATION

Newton School of Technology — B.Tech, Computer Science & Engineering (AI & ML) 2026 – 2030 (expected)

PROJECTS

Kavach — local privacy shield for AI chats Oct 2026

`Python · FastAPI · Hugging Face Transformers · Ollama · Tesseract OCR · TypeScript · github.com/diipanshuuuu/Kavach`

- Built with a team at Hacktoberfest Hack Day Pune 2026 (Best Open-Source AI Project track): a Chrome/Firefox extension that detects Indian personal data (Aadhaar, PAN, bank details, names, addresses) in pasted text and uploads, and masks it before it reaches ChatGPT, Gemini or Claude.
- Runs fully on-device: checksum-validated rules (Verhoeff, Luhn, mod-36), a multilingual NER model and an optional Qwen3-4B deep scan via Ollama. Adding the NER model lifts recall from 68.9% to 97.3% at 100% precision across 150 synthetic documents (~60 ms per document on a laptop CPU).
- Redacts images, scanned PDFs and PowerPoint files using OCR in English, Hindi and Marathi, blurs faces, QR codes and barcodes, and restores real values on the user's screen only.

NST SDC Website Redesign — independent, unofficial Sep 2026

`HTML · CSS · JavaScript · Vercel · nst-sdc-site-ten.vercel.app`

- Designed and built a from-scratch redesign of Newton School of Technology's Student Developer Club website in vanilla HTML, CSS and JavaScript, with no frameworks or UI libraries.
- Implemented a working in-browser terminal (help, repos, stack, join, theme), a ⌘K command palette and a filterable showcase of the club's real student repositories.
- Added persistent dark and light themes, client-side form validation and a responsive layout tested down to 360px.

SysCleanX — Windows PC cleaner & app uninstaller Sep 2025

`Python · customtkinter · github.com/htmnsrc/SysCleanX`

- Built a lightweight desktop utility that clears temp files, internet caches, prefetch data and the recycle bin, and launches uninstallers for installed programs.
- Designed a single-window, responsive interface with no background processes; open-sourced under the MIT license.

SKILLS

Languages	Python, JavaScript, C, C++, Rust, Bash
Web	HTML, CSS, JavaScript, responsive design
AI / ML	Ollama, Hugging Face, local LLM hosting, model training
Tools	Git, GitHub, VS Code, Vercel
